

BOSS

Make Every Watt Count

Our solution monitors & controls electrical appliances to optimize load management.

A Retrofit Solution So You Can Control Your Appliances

The BOSS Atmospheres® Platform

- Reduces cost & reduces carbon footprint
- Controls energy consumption on demand and during after-hours
- Schedules energy consumption for all connected appliances
- Provides multiple ways to control: by building, by floor, by room, by appliance
- Reports peak power utilization (kW) and energy consumption (kWh)
- Monitors voltage, current, and power data every 5-minutes
- Supports compliance reporting by storing baseline & historical usage

**Decrease Energy Spend
Increase DR Revenue**

BOSS

Designed &
Manufactured
in the USA

Make Every Watt Count

Designed for Commercial Buildings to efficiently control appliances like window a/c units, copiers, vending machines, air purifiers, computer labs, dehumidifiers, and virtually anything plugged into an outlet.

Appliances are no longer hard to control.

Atmospheres® makes it easy to reduce energy consumption and qualify for demand response incentive programs.

Energy Control

BOSS Controls installs 120V or 220V Smart Plugs linked to software on a cloud platform so you can control appliances in seconds.

Energy Savings

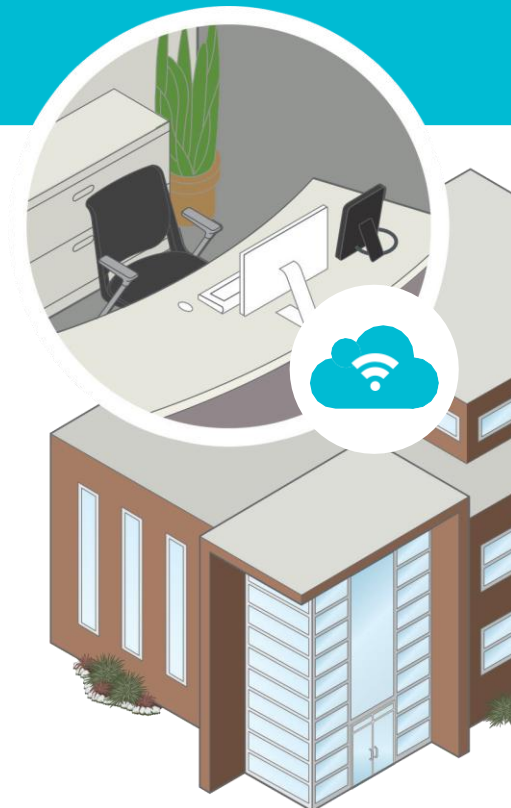

Control energy usage on demand or after business hours even when you're not onsite.

Optimize Load, Maximize Savings

Manage your load profile to maximize participation in Energy Efficiency, Demand Response, Capacity, and Transmission programs.

Stay In Compliance

View power usage and analyze savings with up to a year of stored data.

Control & Schedule

BOSS Smart Plugs are remote switches capable of advanced scheduling 24-hours per day.

Group Devices for Easy Control

Group equipment by appliance type, floor, or building to simultaneously control, schedule and measure power.

End-to-End Security

Manage energy consumption across all your appliances with secure hardware and software.

Open BOSS API

Control your devices and data via dashboard, mobile apps or applications through an open API.
